Fake Blood

Fake blood is really quite simple all you need is red food coloring, and Karo Syrup (which you can find at ant local grocery store).

All you really do is add as many drops of the food coloring to the syrup as you wish and you have instant blood. Hey why buy it from a store when you can make it for free? But be careful it stains. This blood should not be put on outside props because it will attract bugs.

This blood should only be used for costumes or for blood running out of the mouth.

Another way to make blood that will last is to just to melt a red candle over your prop and you have instant blood that will last.
