Skull Dot Room

I wanted to do a Dot Room like Trish, but wanted to use something slightly more scary than dots

Printed out skulls and spray glued the to the wood and used a 1/8" Dremel bit and router attachment to cut out the template

I used 3 colors of spray paints. The template will clog up with paint slightly, so I lay paper towels down gently to soak up the extra paint

Under regular light; you can see a few skulls in the center that bled, because I let paint build up on the template.

Under black light

The actor should have a black costume with the same pattern to be camouflaged and a black hood.

You would think that using a template would go fast, but it took me 1-1.5 hrs just to spray this twin sheet. The black twin flat sheets from Walmart are cheap!! Thanks Trish!

Actor in Skull Dot room hid with glowing white gloves behind their back and then would pull out the sudden appearance of the glowing hands to freak TOTs out.

Skull Dot room was a huge success and I enjoyed scaring the bejeezus out of even adults.
