## Spinning Skull Ghost

I bought a \$6 Glow-in-the-dark skull and wired it with LED for eyes. I used coat hangers to add arms to hang sheer fabric on. I hung the ghost with fishing line at 3 places to prevent the ghost from twisting in the wind.

I used a scavenged VCR motor to drive the ghost on a 1/4" dowel. I used a fishing weight on the other end as a counter weight and spray painted motor, dowel, and weight black.
