QUICK HALLOWEEN YARD HAUNT LIGHTING PROCTORS

In our Halloween yard haunt display, we try to keep our lighting simple.

We use 100 watt outdoor Par-38 Spotlights and weather resistance lamp holders.

Obtained from
Omarshauntedtrail.com

We've changed over to the metal spotlight holders instead of the plastic ones because they are more durable.

Here is an example of the spotlight holder that you can stake in the ground and a colored Par-38 outdoor flood light.

Over the years, we've learned the hard way that the spotlight holders corrode and collect water in the socket if they are not covered.

We've built small boxes to cover each floodlight and holder. They hide the light when you are looking at our display from a distance since they are invisible to the eye at night in the yard.

A green colored Par-38 outdoor floodlight in in the outdoor spotlight holder covered by our wooden weather protector.

Here are a couple of the covers we built.

Here is a modified spotlight holder that we use to illuminate our zombie on the roof. The lamp holder is fastened to a 2"x4" piece of wood and the cover is also attached.

This is what we used to build our yard haunt lighting and weather protection.
