Laundry Detergent Jug Chainsaw

What I used:

- Laundry Detergent Jug
- Wood burning tool
- Duct Tape
- two way tape
- Screws
- old Tupperware Bowl
- Front piece to a broken humidifier
- rubber pump button to a broken dish scrubber
- screw driver
- snorkel tubes
- Electric Tape
- USPS Flat Rate Box
- Exacto Knife
- Gray Primer, and Metallic Aluminum Spray Paint
- Red, silver, and Yellow acrylic paint
- paint brushes
- Red Tulip Paint
- pen
- scrap metal
- Dremel

1. First I take the Plastic Jug, which is a laundry detergent jug.

2. Using the wood burning tool, I took off the two nozzles at the base of the jug.

3. And also cut a slot at the bottom of the jug.

4. I used the duct tape to cover the holes.

5. after covering the accidental hole I made from laying the jug on the wood burning tool with the duct tape, I attached the old Tupperware bowl to the jug with screws. and cut slots into the bowl with the wood burning tool.

Obtained from
Oma's Haunted Trail.com

6. on the other side of the jug, I screwed in the front piece of the humidifier with screws.

7. Using a lit candle, I heated up my two plastic snorkel tubes (Leftover from the summer sei) and bent them accordingly to the handle I needed.

8. I then attached the tubes together and then to the jug.

9. I took one of the nozzles I cut off the jug, and reattached it to the jug like so...

Obtained from Omarshauntedtrail.com

I also used two pieces of the leftover snorkel, and made the pull start handle. I wrapped it with electric tape, and put a screw in it, which will be used to add to the jug later.

10. Taking a usps flat rate box, I drew out and cut the three pieces I needed for the blade part with an Exacto Blade.

11. I painted the two round pieces with gray primer, and the blade piece with metallic aluminum on the edges.

12. I painted the jug with Gray Primer as a base coat.

Obtained from Omarshaurtedtrail.com

13. I then brushed on the yellow Acrylic to most of the jug.

14. I put together the three cardboard pieces using two way tape, and painted the letters on with tulip paint.

15. I took the slot piece I had cut out of the bottom. I then cut it in half and then cut a slot down the side, and wedged the blade in between them. I then put it into the jug, and screwed it in place. I then wrapped the handles with electric tape.

16. To make it more stable, I cut out two pieces of scrap metal, drilled holes in it, and screwed a plate into each side of the blade to prevent it from wobbling or falling out.

Obtained from Omarshaurpedtrail.com

17. I then add the pull start handle, and the with gas cap to the nozzle with electric tape. And attach the blue push button into the humidifier face for a chainsaw primer bulb.

18. I then took out the inside pieces to a pen, and used it to make the blood splatter. I did this by filling a cap with blood, sucking in a tiny bit of blood into the small end of the pen, and blowing hard into the other end. Making it splatter and spray onto the chainsaw.

Also using a brush to cover the blade tips.

And there you go!!!
