PVC Standing Dummies

Building a real looking standing dummy is really simple and is also fun to make materials:

- 1/2 inch or 3/4 inch (your choice) PVC pipe
- several different angles of PVC connectors (this is determined by the body position)
- old clothes
- mask
- gloves

Obtained from
Omarshauntedtrail.com

1. Cut lengths of PVC for upper and lower legs, and upper and lower arm parts, spine , neck, hip and shoulder pieces.
2. Connect the neck, shoulders and spine with a four way connector.
3. The spine and hips by three way connectors.
4. You decide how much angle to put your:
 - shoulder to upper arm joints
 - elbow joints
 - hip to thigh joints
 - Knee joints

5. you can either glue the joints together or you can leave them unglued depending on if you want to take it apart.

6. To get it to stand up just pound some rebar into the ground and slide the leg piece over it. If you want it to have shoes cut a hole in the bottom of the shoes for the rebar to slide through.

7. Put the mask on it. dress, stuff as appropriate and you have a great looking prop.
