TRANSFORMING WIG HEADS

Wighead + Celuclay = New Static Prop head

Below is a how-to for transforming regular styrofoam wig heads into affordable monster, witch, or whatever face you want static prop head using a product called Celuclay, which is a paper mache type material.

Celuclay can be found at any arts and crafts store as well as Walmart.

A 5 pound bag runs about \$25.00 or a 1 pound bag for \$5

A little goes a long way with this product.

Keep in mind that this will make your wig head very heavy depending on how much Celuclay is applied to the form.

For lighter weight wig heads you may want to try Model Magic also available at the above locations.

Mix desired amount of celuca clay with water .. mixture should feel like normal clay.. not too wet.. the wetter it is the longer it takes to dry so keep that in mind when mixing. Also keep a bowl of fresh water near by to keep your hands wet while applying.. this keeps the celuca clay from sticking to you and helps to smooth out any bumpy or rough parts.

Any standard styrofoam wig head will work .. you may also use this on foam balls or beach balls or whatever .. this stuff seems to stick to just about anything.

You simply apply celuca clay to the wig head forming the face you want. This particular one was going to be a goblin.

Once full face is formed allow to dry.. these took about 1 week to dry completely. I used glass stones for eyes. These were painted with acrylic paint once dry. A clear coat should be heavily applied if using prop outdoors. Examples of finished products:
