## Fake Fire

Build real looking fire without getting burned. All you need you can find at your local hardware store.

### Materials:

- piece of 3ft by 3ft of silver silk (or any size, the bigger the silk the bigger the flame)
- a fan with controllable speeds
- a bright orange flood light
- cardboard and paint (optional)
- String or thread

1. Find the window you want use the effect in.
2. Attach the thread to the bottom and top of the silk.
3. With scissors cut a jagged line at the top of the silk (optional)
4. Attach the bottom strings to weights to hold the silk in place in front of the window.
5. Attach the top strings to a curtain rod or any other place to hold the silk loosely up.
6. Place orange light in front between the silk and the window.
7. Place the fan between the window and silk facing up.
8. Use the cardboard to create the edges of the interior room, paint and place near the window.
9. Turn on the fan and orange light and you have instant fake fire.
