4 Channel Dimmer Power Box

I had really noticed that although I was happy with the overall lighting last year, the intensity of the lights was way too bright. Since working with all things electrical makes me nervous I enlisted the help of father to wire this up for me. Basically he wired 4 outlets to 4 dimmer switches creating 4 channels that can be individually dimmed to whatever I want. I anticipate this will give me far greater control over the lighting and make the haunt less day-glow and much more dark & spooky.

Warning: This prop requires 120V AC line voltage. Line voltage can kill! Please be careful and make sure you know what you are doing and that everything is hooked up properly.
