"super easy foam/ wire bodies....."

The viking darkworks way...

OK here is a step by step tutorial on how to make a super light weight fully articulated foam over wire Skeleton/ and/ or Body....I haven't seen really anyone else create a body in this fashion, but its a really good way to do it, for a couple of reasons;

- 1 - CHEAP!!!! did I mention that?
- 2 - Pose able, place them anyway you want!
- 3 - Light weight, a whole 6' fig weighs about 6 lbs!!!! (perfect for pneumatics)
- 4 - tough, you probable could throw it off a building and it would be OK!!!!
- 5 - easily fixable (if you need to)
- 6 - great base to corps up using Latex and spider webs....
- 7 - Fairly quick to make....(about 2-3 hrs...) or spend 45min a evening spread over 3-4 evenings

Step 1- the materials:

- Cool Foam Skull from a supplier or store....(or even a Papermache one.....) free or about \$9
- 1 roll of Chicken Wire \$9
- 1-2 Cans of "RONA" brand spray foam \$4 each!!!! cheapest in Canada!
- 10 heavy duty zip ties.....\$2
- 1 diagram of a anatomically correct skeleton to guide you (free off the internet)

Step 2 Measure and roll your chicken wire, check measurements, and zip tie joint together.....

Here I have worked on the Arms.....and zip tied em together.....

Step 3 time for foam.....

OK so using spray foam you simply "fill in the bone areas....."

Here are the Arms

Legs

Arms again

Some assembly required...heheheh, here you see the wire torso, and PVC "spine"

Here we are working on a simple Ribcage

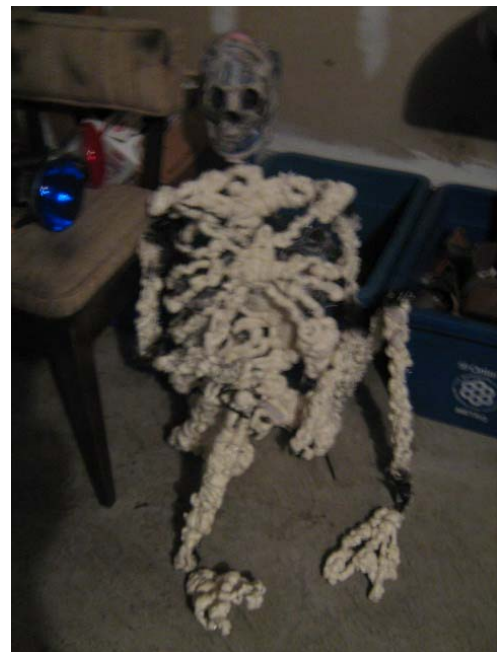

OK now we are assembled.....simply with Zip ties.....

OK now he is getting ready for his Modeling career....Next will be final hands feet.....then Corpsification, then.....Paint!!!!!!!!!!!!

Obtained from
Omarshauntedtrail.com

The Skull, I went with one of our Foam Cast ones, but needed to give it some "character"! So I cut out the Jaw, and kinda made it screaming! So you see on the right temporarily mounted on the body.....the head will be tilted as if it's "real"

OK, Now here he is after some Corpsing, The technique I used was simply stretchy spider webs, and Liquid Latex from Sculpture supply Canada

next will be paint.....

Initial Paint! 2 base coats Black in the joints and cappacino everywhere else...Left

Then on the right after drybrushing with a grey flat primer....
