## SKELETON HANGED MAN

The sight of a skeleton or fake body hanging from your favorite tree or from a beam on Halloween (or if you're like us all year long) is a very creepy sight indeed. But tying an authentic Hangman's noose is one of those elusive techniques that seems to be forgotten shortly after learning how it's done. After all, how often do most people tie a Hangman's noose?

The instructions for tying the Hangman's Knot are pictured on the left. The hangman's noose requires a lot more rope than you might think.

We prefer to use 1/2" or 5/8" rope, that is at least 16 feet long. This will give you a noose rope about six feet long. Thick hemp type rope can usually be bought at your local hardware store by the foot.

**Danger:** This noose is the real thing! We CAN NOT stress this enough!! Never put it over a living persons head and never play hangman. Do not leave where children can access it. This type of real noose can and has killed people since old west days. If you are not a responsible adult, do not make or use a hangman's noose! If you're not sure if you are a responsible adult, do not make or use a hangman's noose! This is not a toy!!! This prop is for use with body props ONLY!!! We can not stress this enough!! Halloween Online accepts no responsibility for irresponsible or misuse of this prop.
